Eduardo Moreira Santarosa

Full-stack Developer

Americana, SP, Brazil dev.eduardosantarosa@gmail.com linkedin.com/in/edumesz github.com/edumes edumes.dev

Summary

Full-stack developer with 4+ years building and running business systems: React and Next.js front ends, Node.js, TypeScript and Python APIs, PostgreSQL, ERP and partner integrations, mobile apps and automation. I decide the architecture of new systems, work directly with clients, review code and own systems in production.

Experience

Full-stack Developer, NEC Brasil Aug 2022 to present

- Own business systems across 12 domains (HR, finance, billing, workshops, logistics, transport and more) from data model to interface, including deploys, incidents and ongoing changes in production.
- Decide architecture and stack for new systems and modules; gather requirements, estimate and demo deliveries directly with clients.
- Built a React Native app for barcode order picking from scratch (2024); in 2026 rewrote the flow for orders split into parts, moving the rules out of the screens into modules covered by about 50 tests.
- Extended a multi-tenant platform that schedules and monitors Python robots on Windows workstations: workstation queues, release rollout, department permissions and new robot integrations.
- Integrated ERPs and partner APIs (Omie, TecnoSpeed, Vuupt, D4Sign) and automated PDF and Excel reports.
- Review colleagues' code and help newer developers get up to speed.

Case studies

Picking and checking orders on the warehouse floor without losing track
A phone app for pickers and collectors to scan products, split orders into parts and resume work where it stopped.

Robots that drive systems with no API, and a panel to command them
A multi-tenant platform to distribute, schedule and monitor robots on Windows workstations. I worked on the web panel, API and agent, connecting automation execution with the tracking of recurring tax and accounting work.

The life of every device, from receiving to warranty
A management system where every payment terminal is tracked by serial number through purchases, sales, repairs and warranty.

AuthSales, business management on a reusable foundation
My personal project, developed in the boilerplate repository: a multi-company SaaS connecting sales, POS, inventory, finance and services, with a foundation that other systems can also use.

Tools

Backend	Node.js, TypeScript, Fastify, Express, NestJS, Python, FastAPI, PHP, Laravel
Frontend	React, Next.js, Vite, Tailwind CSS, shadcn/ui, Material UI
Mobile	React Native, Expo
Data	PostgreSQL, MySQL, Redis, TypeORM, Prisma, Knex, SQLAlchemy
Automation	Playwright, Puppeteer, pywinauto, PDF and Excel
Infra	Docker, Git, GitFlow, AWS S3, WebSockets

Education

Computer Science, Faculdade de Americana. 2024 to 2028, in progress

High school and IT technical course, Colégio Politec. 2021 to 2023

Languages

Portuguese (native), English (intermediate)
